

Toyo Denki Seizo K.K. Contributes to the Development of Social Infrastructure Systems

Integrating the exceptional motor drive technologies since establishment with our breakthrough advanced technologies to help build social infrastructure systems that are considerate of the global environment through global business development.

A new type of light rail vehicle (LRV) equipped with electrical equipment supplied by the Company will start operations in Los Angeles in autumn 2015.

In November 2012, TOYO DENKI USA, Inc., the Company's wholly-owned U.S. subsidiary, received an order from KINKISHARYO International, LLC, a U.S. subsidiary of The Kinki Sharyo Co., Ltd. The order was for electrical equipment for LRVs of the Los Angeles County Metropolitan Transportation Authority (LA Metro). At long last, the new type of LRV will begin operating in autumn 2015. This marks the Group's second delivery of electrical equipment in the U.S., following the delivery of equipment for LRVs to Dallas Area Rapid Transit (DART).

By supplying high-quality electrical equipment for rail vehicles, we will continue contributing to the development of urban transportation in the U.S.

● **Editorial Policy** ●

We have been publishing this report since 2013 with the goal of allowing a wide range of stakeholders to have a better understanding of the Company. This report combines our management policy with reports on our businesses, CSR and finances. We are committed to describing our initiatives during the year and our future direction in a manner that is easy to understand.
