# lumit/Arithmetic controller 

## DG-AMP

## User's mamual

Thank you very much for your purchase of our DG-AMP 1 unit arithmetic controller.
This hardware version of user's manual contains the explanation about hardware specifications and handling of the said controller. Please read this user's manual thoroughly for proper use of this controller.

Further, we request you to read related manuals shown in the following table concurrently.

| Name | Manual <br> No. | Contents |
| :--- | :---: | :--- |
| $\mu$ GPC SX series programming <br> manual (Command word version) | IGJ057A | This manual describes the memory, language, and details of system <br> definition, etc. of $\mu$ GPC SX series. |
| $\mu$ GPC SX series programming <br> manual (Operation version) | IGJ058A | This manual explains the menu and icons, etc. of TDsxEditor and <br> describes all operations of TDsxEditor. |
|  |  |  |

## Cautions

(1) It is forbidden to reproduce any part or all of the details of this manual without our permission.
(2) Please note that the details of this manual, specifications, etc. are subject to change without notice for the improvement.
(3) We made the details of this manual doubly sure, however, if you have any questions or you notice any error, contact our sales office published at the end of this manual. At such occasion, please inform the manual number published on the front cover as well.

Before using this product, read "Important Safety Instructions" thoroughly for proper use.
Here, labels of Important Safety Instructions are classified into "DANGER" and "CAUTION" and their meanings are as follows:
: Risk of death or serious injury from improper use.
: Risk of medium handicap, slight injury or damage to property from improper use.
FYI, even in the case of items classified into ! CAUTION, they have a probability of leading to the serious consequence as the case may be.
In either case, important details are described then always follow them.
Though we show the items requiring your special attention as follows, they are also indicated in the text of this manual.
While this controller is alive, do not touch the live part like terminal, etc. Electric shock may occur.
Always perform the mounting, removal, wiring works and maintenance/inspection with power supply to this
controller OFF. Hot work may result in electric shock, malfunction, and breakdown.
Configure the emergency stop and interlock circuits at the outside of PC. Breakage and accident may occur due to
breakdown in PC. breakdown in PC.

ODo not use the items that were found damaged or deformed during unpacking. It may cause fire, malfunction and breakdown.

- Do not apply impact to the product through drop or rollover, etc. It may cause breakage and breakdown of the product.
- Mount the product in accordance with the details published in the instruction manual and others. Defective mounting may cause drop of product, malfunction and breakdown.
- Use this product under rated voltage and current published in the instruction manual and others. Use of this product under the voltage and current other than the rated may cause fire, malfunction and breakdown. Use (Store) this product under environment published in the instruction manual and others.
- Use (Storage) of this product under the environment with high temperature, high humidity, condensation, dust, corrosive gas, oil, organic solvent and especially big vibration/impact may cause to electric shock, fire, malfunction, breakdown when the product is used.
-Select the electric wires suitable for voltage to be applied and current to be passed to tighten them at the specified torque. Defective wiring and tightening may cause fire, drop of product, malfunction and breakdown.
- Execute the wiring work so as to prevent the foreign matter, such as dust, electric wire scrap, iron powder from entering into inside of the equipment. Fire, accident, malfunction and breakdown may result.
- Always ground the grounding terminal. Failure to perform grounding work may cause electric shock and malfunction.
-Check the terminal screws and mounting screws for secure tightening periodically. Use of this product with such screws loosen may cause fire and malfunction.
- Always fit the terminal cover to the terminal block. Electric shock and fire may occur.

Operations such as program change, forced output, start and stop while running shall be performed upon completion of check for the safety.
Mistake in operation may cause the machine to operate and may result in breakage and accident of the machine.

- Insert the tool connector in proper direction. Malfunction may result.

OBefore you touch PC, first touch the grounded metal, etc. to make the static electricity charged in the human body, etc. discharge. Excessive static electricity may cause malfunction and breakdown.

- Perform the wiring securely in accordance with the details published in the instruction manual and others. Wrong wiring may cause fire, accident and breakdown.
OWhen you pull out the plug from the receptacle, do not pull it out holding the cord. Fire and breakdown due to break of cable may result.
- Do not make repairs of this product absolutely at the site and request its repair to us. It may cause fire, accident and breakdown.
- When you try to clean this product, turn OFF the power supply and then use the towel soaked with tepid water, etc. Use of thinner or other organic solvent may cause melting or discoloring of the equipment surface.
- Do not modify or disassemble the product. It may cause breakdown.
- When you dispose of this product, handle this product as industrial waste.

OProduct published in this manual is not the one designed or manufactured for the sake of being used in the equipment or system that affects human life.

- When you study the use of product described in this manual for the control of nuclear energy, aerospace, medical care, traffic equipment, passenger mobile unit or special application for these systems, etc. make an inquiry to our sales contact.
-When you apply the product published in this manual to the equipment that breakdown of our product affects the life or occurrence of serious loss can be expected, always install the safety equipment.
* Manual number is published at lower right of the front cover of this manual.

## 1-1 Overview

## (1) PLC functions

The intelligible GPC language was adopted as DG-AMP. The application program which has the same function as our company's PLC $\mu$ GPCsx series can be created.
(2) External I/F

Digital input and output (DC12V/DC24V), analog input and output ( -10 V to +10 V ), and communication I/F (RS232C, RS422, RS485) are standard equipment of external I/F, to built various applications.
(3) Frequency counter function

PG input is exclusively for two-phase and can measure the input pulse frequency up to 36 kHz as frequency counter of PG.
FI input can measure the frequency of input pulse up to 36 kHz as frequency counter for single phase or two-phase that combines two channels.
(4) I/F for internal extension BUS

This controller installs internal I/F for extension BUS that can place communication option board for our inverter on board and installation of OPCN-64 to the broad makes this controller as OPCN-1 slave equipment and allows the connection with other master equipment.
(5) Simplified liquid crystal console

This controller has console LCD indicator, check of data stored in the internal resistor can be made without personal computer. In addition, data change is possible by the operation from the switch part.

2-1 System configuration

- Connect to the external communication equipment through exclusive connector.
-Connection with digital input / output and analog input is made at the terminal block.

## 2-2 Digital input / Input memory layout

| Resistor name | Relay name | Terminal No. | Details |
| :---: | :---: | :---: | :---: |
| i00000 | I00000 | DI-0 | Digital input signal |
|  | I00001 | DI-1 |  |
|  | I00002 | DI-2 |  |
|  | I00003 | DI-3 |  |
|  | I00004 | DI-4 |  |
|  | I00005 | DI-5 |  |
|  | I00006 | DI-6 |  |
|  | I00007 | DI-7 |  |
|  | I00008 | DI-8 |  |
|  | I00009 | DI-9 |  |
|  | I0000A | DI-A |  |
|  | I0000B | DI-B |  |
|  | I0000C | DI-C |  |
|  | I0000D | DI-D |  |
|  | I0000E | DI-E |  |
|  | I0000F | DI-F |  |

2-3 Analog input memory / Input memory layout

| Resistor name | Terminal No. | Details |
| :--- | :--- | :--- |

## 2-4 Frequency measuring register

| Resistor name | Details |  |
| :--- | :--- | :--- |
| i00010 | 2-phase PG counter frequency measured value, A frequency |  |
| i00011 | 2-phase PG counter frequency measured value, B frequency |  |
| i00012 | FI-1 frequency measured value |  |
| i00013 | FI-2 frequency measured value |  |
| i00014 | 2-phase PG counter direction of rotation <br> 2-phase FI counter direction of rotation |  |
| i00015 | 2-phase PG counter number of detected measuring errors <br> (sum of A and B) |  |
| i00016 | FI-1 counter number of detected measuring errors |  |
| i00017 | FI-2 counter number of detected measuring errors |  |
| i00018 | PG-A UP/DOWN count value |  |
| i00019 | PG-B UP/DOWN count value |  |
| i0001A | FI-1 UP/DOWN count value |  |
| i0001B | FI-2 UP/DOWN count value |  |

2-5 Digital output memory / Output memory layout

| Resistor name | Terminal | Terminal No. | Details |
| :--- | :--- | :--- | :--- |
| o00400 | O00400 | DO-0 | Digital output signal |
|  | O00401 | DO-1 |  |
|  | O00402 | DO-2 |  |
|  | O00403 | DO-3 |  |

## 2-6 Analog output memory / Output memory layout

| Resistor name | Details |  |
| :--- | :--- | :--- |
| o00042 | AO-0 (DAC CH1) |  |
| o00043 | AO-0 (DAC CH2) |  |
| o00044 | AO-0 (DAC CH3) |  |

## 2-7 Pulse output memory / Output memory layout

| Resistor name | Details |  |
| :--- | :--- | :--- |
| o00050 | PO-0 (Pulse output) Set pulse width/Output level |  |
| o00051 | PO-1 (Pulse output) Set phase lag width/Output level |  |
| o00052 | PO-2 (Pulse output) Set phase lag width/Output level |  |
| o00053 | PG/FI phase mode |  |
| o00054 | PO-0 to 2 Reference frequency rate |  |
| o00055 | PO-3 (Rate multiplier) divider value after output |  |
| o00056 | PO-3 (Rate multiplier) set value |  |
| o00057 | PO-3 (Rate multiplier) control data |  |
| o00058 | System reserved |  |

## 2-8 OPCN interface register

| Resistor name | Details |  |  |  |
| :--- | :--- | :--- | :--- | :---: |
| w00060 | OPCN-1 Output register (Master > DG-AMP) |  |  |  |
| w00061 |  | Number of output words |  |  |
| w00062 |  |  |  |  |
| w00063 |  |  |  |  |
| w00064 |  |  |  |  |
| w00065 |  |  |  |  |
| w00066 |  |  |  |  |
| w00067 |  |  |  |  |
| w00068 |  |  |  |  |
| w00069 | OPCN-1 input register (Master <-DG-AMP) |  |  |  |
| w0006A |  | Number of input words |  |  |
| w0006B |  |  |  |  |
| w0006C |  |  |  |  |
| w0006D |  |  |  |  |
| w0006E |  |  |  |  |
| w0006F |  |  |  |  |
|  |  |  |  |  |
| w003FC | OPCN-1 Number of input words set value |  |  |  |
| w003FD | OPCN-1 Number of output words set value |  |  |  |
| w003FE | OPCN-1 Baud rate set value |  |  |  |
| w003FF | OPCN-1 Parameter setting flag |  |  |  |

## 2-9 Announce register

| Resistor name | Details | Unit | Example |
| :--- | :--- | :--- | :--- |
| z00000 | Running status (see note 1) |  |  |
| z00001 | Running status (see note 1) |  |  |
| z00002 | Running status (see note 1) | BCD mSEC |  |
| z00003 | (Task 1 execution time) | BCD mSEC |  |
| z00004 | (Task 2 execution time) |  | 0501 H |
| z00005 | (YYMM indication) Time |  | 0123 H |
| z00006 | (DDHH indication) Time |  | 5959 H |
| z00007 | (MMSS indication) Time |  |  |
| z00008 |  |  |  |
| z00009 | (0.25m SEC counter) | 1 mSEC |  |
| z0000A | (1SEC counter) |  |  |
| z0000B | (System task counter) |  |  |
| z0000C | System reserved |  |  |
| z00034 | System define information number of used words |  |  |
| z00035 | Function number of used words |  |  |
| z00036 | Program number of used words |  |  |
| z00037 | General-purpose file information number of used |  |  |
| words |  |  |  |
|  |  | Sec. (real number) |  |
| zr002C | Task 1 scan time | Sec. (real number) |  |
| zr002E | Task 2 scan time |  |  |

3-1 DG-AMP general specification

| Item |  | Specification |
| :---: | :---: | :---: |
| Physical environment | Operation ambient temperature | $-0^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$ |
|  | Storage (Transportation) temperature | $-20^{\circ} \mathrm{C}$ to $+65^{\circ} \mathrm{C}$ |
|  | Relative humidity | 20 to 95\% No condensation |
|  | Level of contamination | Level of contamination 2 Note 1) |
|  | Corrosion resistance | No corrosive gas. <br> No adhesion of organic solvent |
|  | Working altitude | 2000 m or less above altitude (Atmospheric pressure during transportation shall be 70 kPa or more) |
| Mechanical operating conditions | Vibration proof | Single amplitude: 0.15 mm Constant acceleration: $19.6 \mathrm{~m} / \mathrm{s}^{2}$ Up-and-down motion for 4 hours, transverse/longitudinal oscillation for 2 hours each, 8 hours in total |
|  | Impact resistance | Peak acceleration: $147 \mathrm{~m} / \mathrm{s}^{2}, 3$ times in each direction(15G) |
| Electric operating conditions | Noise resistance | Noise simulator method Rise time 1ns, Pulse width $1 \mu \mathrm{~s}, 1 \mathrm{kV}$ |
|  | Static electricity discharge resistance | Contact discharge method: $\pm 6 \mathrm{kV}$, Aerial discharge method: $\pm 8 \mathrm{kV}$ |
|  | Radiation electromagnetic field resistance | $10 \mathrm{~V} / \mathrm{m}$ ( 80 MHz to 1000 MHz ) |
| Structure |  | Structure board-contained type |
| Cooling method |  | Natural cooling |
| Mass |  | 4kg |

Note 1) Level of contamination 2: Normally, a condition that conductive contamination is absent. However, in some cases, temporally conductivity may develop due to condensation.

## 3-2 Performance specification

| Item |  | Specification |
| :---: | :---: | :---: |
| Arithmetic control mode |  | Stored program cyclic scan mode |
| I/O control mode |  | Direct refresh mode |
| Programming language |  | GPC language (Ladder diagram, data flow) |
| Program capacity |  | 64 k word (About 800 pages) |
| Number of inputs/outputs |  | 512 word |
| Data memory | I/O memory (i0/o0) | 512 word |
|  | Global memory (g0,gr) | 16384 word |
|  | Local memory | 16384 word |
|  | File memory (fi,fr) | 65536 word |
|  | Retain memory (ri,rr) | 65536 word |
| Self-diagnostic function |  | Watchdog timer |
| Memory backup |  | Program (including file memory), parameter <br> - Flash ROM <br> Retain memory <br> - Built-in RAM <br> (At the time of battery option un-equipped, memory kept one week after power off.) <br> (At the time of battery option equipped, backup time for 10 years.) <br> Battery option: Lithium primary battery. |
| Calendar |  | $\pm 60$ seconds/month $\left(25^{\circ} \mathrm{C}\right)$ <br> (At the time of battery option un-equipped, memory kept one week after power off.) |
| Digital I/O |  | $\begin{array}{ll}\text { Sink/Source input } & 16 \text { points } \\ \text { Sink transistor output } & 4 \text { points }\end{array}$ |
| Analog input |  | 8CH |
| Analog output |  | 3CH |
| Communication I/F |  | 2CH |

Note 1) When battery option equipped, exchange if out of guarantee term, even if there is battery capacity remnant.
Note 2) When battery option equipped, battery will not be consumed in the state of main power turned on.

## 3-3 DG-AMP Power supply specification

| Item | Specification |
| :--- | :--- |
| Rated input range | AC100V/200V <br> (AC85V to VC 265 V |
| Rated input current | AC100 -0.6 A or less <br> AC200v -0.35 A or less |
| Rated input frequency <br> (Frequency tolerance) | $50 / 60[\mathrm{~Hz}]$ <br> (48 to $62[\mathrm{~Hz}])$ |
| Input rush current | $20[\mathrm{~A}]$ Typ. AC $100[\mathrm{~V}]$ |
| Over-current protection | Trips when the current exceeds $105 \%$ or more of the rated <br> current, automatic reset |
| Over-voltage protection | Trips when the current falls within the range from 115 to $140 \%$ of <br> the rated voltage |
| Power consumption | 30W or less |

3-4 DC voltage input / Input specifications

| Item |  |  | Specification |
| :---: | :---: | :---: | :---: |
| Input signal conditions | Rated voltage |  | DC12/24V |
|  | Maximum allowable voltage |  | DC28V |
|  | Allowable ripple rate |  | 1\% or less |
| Input circuit characteristics | Input mode |  | Sharing between source and sink (Bi-directional) |
|  | Rated current |  | About 5mA (at 24V), about 2.5 mA (at 12V) |
|  | Input impedance |  | About $4.7 \mathrm{k} \Omega$ |
|  | Standard operating range | $\mathrm{OFF} \rightarrow \mathrm{ON}$ | 7.5 to 8.5 V |
|  |  | $\mathrm{ON} \rightarrow$ OFF | 7.5 to 8.5 V |
|  | Input type |  | DC type 1 |
|  | Input delay time |  | 0.5 ms |
| External connection |  |  | Terminal block |
| Insulation mode |  |  | Photo-coupler insulation |
| Dielectric strength |  |  | AC1500V for 1 minute between input terminal package and FG |
| Insulation resistance |  |  | $10 \mathrm{M} \Omega$ or more by means of insulation resistance tester of DC500V <br> Between output terminal package and FG |

3-5 Relay output / Output specifications

| Item |  |  | Specification |
| :---: | :---: | :---: | :---: |
| Output power supply condition | Rated voltage |  | AC250V DC30V |
|  | Allowable voltage range |  | AC250V |
| Output circuit characteristics | Output type |  | Relay output |
|  | Maximum load current |  | AC/DC 2A (common 5A) |
|  | Minimum switching voltage/current |  | DC0.1V 0.1mA |
|  | Output delay time | OFF->ON | 10ms or less |
|  |  | ON-> OFF | 5 ms or less |
| Output protection type | Built-in fuse |  | None |
|  | Output type |  | Relay output |
|  | Surge cutback circuit |  | Varistor |
|  | Other output protection |  | None |
| Maximum switching speed |  |  | 100 per sec. or less |
| Mechanical life |  |  | 20 million times |
| Electric life |  |  | 100,000 times or over with max load current |
| External connection |  |  | Terminal block |
| Output signal indication |  |  | None |
| Insulation mode |  |  | Dry contact output |
| Dielectric strength |  |  | AC1500V for 1 minute |
| Insulation resistance |  |  | $160 \mathrm{M} \Omega$ or more With DC500V megger |

## 3-6 Transistor output / Output specifications

| Item |  | Specification |
| :--- | :--- | :--- |
| Output power <br> supply condition | Rated voltage | 12 V |
|  | Allowable voltage range | 12 V |
|  | Output type | Sink |
|  | Rated current | About $500 \mathrm{~mA} / 1$ point |
|  | Output voltage drop | 15 V or less |
|  | Output <br> delay time | OFF->ON |
|  | ON-> OFF | 0.5 ms or less |
|  | Leakage current during OFF | 0.5 ms or less |
|  | Output type | Maximum $20 \mu$ A or less (1 point) |
| Output protection | Transistor |  |
| External connection | Resistor $10 \Omega$ |  |
| Insulation mode | Terminal block |  |
| Dielectric strength | AC1500-coupler insulation for 1 minute between input <br> terminal package and FG |  |
| Insulation resistance | $10 \mathrm{M} \Omega$ or more by means of insulation <br> resistance tester of DC500V <br> Between output terminal package and FG |  |

## 3-7 Analog input specifications

| Item | Specification |  |
| :---: | :---: | :---: |
| Number of input channels | 8 channels |  |
| Input impedance | About $1 \mathrm{M} \Omega$ |  |
| Maximum allowable input | $\pm 15 \mathrm{~V}$ |  |
| Conversion characteristics | Analog input range | Digital conversion value |
|  | -10 V to 10 V | -8192 to 8191 |
| Resolution | 14 bit (Minimum resolution about 1.2 mV ) |  |
| Comprehensive accuracy (Relative to full scale) | 0.1\% |  |
| Type of digital conversion value | Integer |  |
| Sampling time | $500 \mu \mathrm{~s}$ |  |
| Input filter time | None |  |
| Input delay time | $500 \mu$ s or less |  |
| Other functions | None |  |

## 3-8 Analog output specifications

| Item | Specification |  |
| :--- | :--- | :--- |
| Output channel number | 3 channels |  |
| External load resistance | $1 \mathrm{k} \Omega$ or more |  |
| Analog output range | -10 V to 10 V | Analog setting value |
| Conversion characteristics | Digital setting value | -10 V to 10 V |
|  | -8192 to 8191 | 1.2 mV ) |
| Resolution | 14 bit (minimum resolution: about | $0.1 \%$ |
| Integrated accuracy (to full-scale) | Whole number |  |
| Form of digital convert value | $500 ~ \mu \mathrm{~s}$ or less |  |
| Conversion cycle |  |  |

## 3-9 Communication I/F specifications

| Item |  | Specification |  |
| :--- | :--- | :--- | :--- |
|  |  | RS232C | RS422/, RS485 |
| External <br> interface | Port | 1 channel | 1 channel |
|  | Transmission <br> mode | Full duplex communication mode |  |
|  | Transmission <br> rate | $2400 / 4800 / 9600 / 19200 / 31250 / 38400 \mathrm{bps}$ |  |

## 3-12 Digital input terminal

- Signal input is available at source input or sink (Common to 16 points).
- In the case of source input, ON is recognized when terminal voltage is 8 V or more.

| Terminal No. | Internal relay No. | Terminal No. | Internal relay No. |
| :---: | :---: | :---: | :---: |

| DI-6 | I00006 | DI-E | I0000E |
| DI-7 | I00007 | DI-F | I0000F |

| Terminal No. |  |
| :--- | :--- |
| PG-A | Phase A $\left(90^{\circ}\right.$ lead $)$ signal |
| PG-B | Phase A $\left(90^{\circ}\right.$ delay $)$ signal |
| PG-0V | PG common line |
| PG-12V | External power supply output for PG |

| Register No. | Details |
| :--- | :--- |
| i00010 | PG frequency $-\mathrm{A}(0 \mathrm{~Hz}$ to 36000 Hz$)$ |
| i 00011 | PG frequency $-\mathrm{B}(0 \mathrm{~Hz}$ to 36000 Hz$)$ |
| i 00015 | PG $-\mathrm{A}+\mathrm{B}$ error counter <br> (change detection of 10 Hz or over) |
| i 00018 | PG-A UP/DOWN count value <br> (-32768 to 32767) |
| i00019 | PG-B UP/DOWN count value <br> (-32768 to 32767) |

| Relay No. | Details |
| :--- | :--- |
| I00140 | PG’s direction of rotation: <br> (Setting to 1 leads to reverse rotation, 0 normal <br> rotation) <br> (Toyo’s standard direction of rotation) <br> Direction of rotation: <br> (Setting to 1 leads to lead of phase A) <br> (Setting to 0 leads to lead of phase B) |
| O00530 | PG frequency 1/2 display (1 to 1/2, 0 to 1/1) |
| O00531 | 2-phase PG selection (1 to 2-phase, 0 to single <br> phase/2 channels) |

(Supplement explanation) To return to single phase after selection of 2-phase PG, reset the power. Also, when 2-phase PG is selected, i00011, i00019 and I00140 are invalid. (Single phase to see I00140) In PG direction of rotational, PG-A is normal rotation by phase delay of $90^{\circ}$ in selection of single-phase mode. (Toyo's standard mode)

Also, when 2-phase mode is selected, i 0010 will be +value at $90^{\circ}$ phase delay of PG-A, and -value at $90^{\circ}$ phase lead of PG-A.

## 3-14 FI Input terminal

Normally this terminal is used in single-phase 2 channels, however, use as 2 -phase 1 channel is also available.

| Terminal No. | Details |
| :--- | :--- |
| FI-1 | FI-1CH (Phase A signal) |
| FI-2 | FI-2CH (Phase B signal) |
| PG-0V | FI/PG common line |
| PG-12V | External power supply output for PG |

| Register No. | Details |
| :---: | :--- |

| i00013 | FI-2 frequency <br> $(0 \mathrm{~Hz}$ to 30000Hz) |
| i00016 | FI-1 error counter <br> (change detection of 10Hz or over) |
| i00017 | FI-2 error counter <br> (change detection of 10Hz or over) |
| i0001A | FI-1 UP/DOWN count value (-32768 to 32767) |
| i0001B | FI-2 UP/DOWN count value (-32768 to 32767) |

| Relay No. | Details |
| :---: | :--- |
| 100141 | PG's direction of rotation: <br> (Setting to 1 leads to reverse rotation, 0 normal rotation) <br> (Toyo's standard direction of rotation) <br> Direction of rotation: <br> (Seting to 1 leads to lead of phase A) <br> (Setting to 0 leads to lead of phase B) |
| O00532 | PG frequency $1 / 2$ display (1 to $1 / 2,0$ to $1 / 1$ ) |
| O00533 | 2-phase PG selection (1 to 2-phase, 0 to single phase/2 <br> channels) |

(Supplement explanation) To return to single phase after selection of 2-phase PG, reset the power. Also, when 2-phase PG is selected, i00013, i0001B and I00141 are invalid. (Single phase to see I00141) In PG direction of rotational, FI-1 is normal rotation by phase delay of $90^{\circ}$ in selection of single-phase mode. (Toyo's standard mode)

Also, when 2-phase mode is selected, i0012 will be +value at $90^{\circ}$ phase delay of FI-1, and -value at $90^{\circ}$ phase lead of FI-1.
[About PG and FI input/maximum input frequency]

There are 4 channels including both, but maximum frequency has limits.

## <Formula>

When channel 1 to 4 is f 1 to f 4 of maximum frequency, it is possible to use in the following condition: $\quad \mathrm{f} 1+\mathrm{f} 2+\mathrm{f} 3+\mathrm{f} 4<36 \mathrm{kHz}$

1) Up to 36 kHz is usable in case of 1 channel.

Each will be limited to $18 \mathrm{kHz}(36 \mathrm{kHz} / 2)$ in case of 2 channels.
Each will be limited to $9 \mathrm{kHz}(36 \mathrm{kHz} / 4)$ in case of 4 channels.
2) Both PG mode and FI input can select 2-phase mode

In this case, 2-phase 1 channel (A/B phase input) can also select 36 kHz .
3) Selecting of PG frequency $1 / 2$ display ( $1 / 2 \mathrm{~Hz}$ display mode)

Because the display becomes minus value for the frequency of 32767 Hz , mode to display 18000 at 36 kHz is selectable.

| Terminal No. | Details |

(1) Power supply terminal

This terminal is used for supplying the power from outside.
Ground E terminal to independent and stable C type or D type terminals.

| Polarity |
| :---: |
| AC (L1) |
| AC (L2) |
| E |

(2) RESET button

Use only when resetting the DG-AMP alone.
(Note) Do not push the reset button while operating.
(3) Connectors for communication I/F

These connectors are used when communicating by RS422/RS485/RS232C.
Use exclusive connector.
(4) Programming tool connecting connector

This is the connector for connecting with programming tool (TDsxEditor).
Use D-SUB 9-pin cross cable.
(5) Console switch section

These are switches for data indication and writing operation. See Chapter 5.
(6) Console LCD indicator

This is LED to indicate the control status of DG-AMP.

| Symbols | Name | Lighting condition |
| :--- | :--- | :--- |
| PWR(G) | POWER indication | Turns on when power is turned ON (Internal power <br> supply normal). |
| RUN(G) | RUN indication | Turns on while CPU is running. <br> Blinks while CPU stops (including major breakdown <br> stop). |
| ALM(R) | ALARM indication | Turns on when error occurs. |
| COM(Y) | COMMUNICATION <br> indication | Turns on when communication is established on <br> communication board. |
| SD/RD(G) | SEND/RECEIVE <br> indication | Blinks when data is sent / received. |

(7) Console LCD indicator

This section indicates the data in the internal register.
(8) Mounting hole

Use M3 mounting screws.
(9) Terminal block for digital I/O

This terminal block is used when connection with external digital I/O signal is made. Use M3 fork terminal.

The attachment position of a battery option.
The inside of DG-AMP is equipped with a battery option.
The cover on the left side of DG-AMP can be removed and exchanged.

(1) In case of mounting DG-AMP to the control panel, be sure to insulate from the frame of the control panel and perform independent grounding (C type or D type grounding) for FG terminal.
(2) Put noise-cut trance or noise filter to AC power supply.
(3) Use clipping terminal for the wiring to the terminal block. Be careful to the inclination of the clipping terminal and secure insulation distance (more than 3.2 mm ) from the adjacent. Also use insulation cover for the clipping terminal.
(4) Arrange more than 50 mm from the ambient equipment for ventilation.
(5) Separate from high voltage devise and power devise as possible. Do not parallel wiring with those devise.
(6) Mount vertically from the panel floor and do not mount horizontally.

## 4-1 Programming

Programming of DG-AMP is performed by TDsxEditor.
When you start TDsxEditor, following screen will appear.

First, prepare the project through "File" and "New Project", then prepare the program through "Edit" and "Program new preparation". Details of control are described in the program.

Select the task to which you want to add the program. Priority in computation becomes the relationship as Task $1>$ Task 2 . Normally, relationship is scan time of Task $1>$ Task 2.

Scan time designates the execution period of the task. Designation in 1 msec is available. (As the settings for the value of 1 msec or less, designation of 2 settings, 0.25 msec and 0.5 msec is available)

## 4-2 Editing of the circuit

Edition of the control details can be performed by double-click on "Circuit" in the program.
Edition of "Circuit" gets available after "Program new preparation" has been performed.

While editing new program, opening of the circuit results in "Writing mode". While editing existing program, select "Writing mode".

Circuit symbol can be placed by switching following menus

$\square$ Select "Ladder"
$\square$
$\square$ Select "Main menu".

When you want to shift the mode to the reading mode, select "Writing exit". Mode shifts to reading mode.

## 4-3 Circuit symbol types

There are following types of symbol.
Ladder diagram language

| Symbol | Operation | Data type |
| :---: | :---: | :---: |
| 100000 | Contact"A" |  |
| SI S0 | $S O=100000$ \& SI |  |
| 100000 | Contact"B" |  |
|  | $\mathrm{SO}=\overline{\mathrm{IOOOOO}} \& \mathrm{SI}$ |  |
|  | Logic inversion |  |
|  | $\mathrm{SO}=\overline{\mathrm{SI}}$ |  |
| $\text { Só } 000000 \text { ل }$ | Coil |  |
|  | $000000=$ So |  |

| $\xrightarrow[(1)]{S I}$ | Connector load store | bit int word | real <br> BCD8 <br> BCD4 |

## 4-4 Download/Upload

When Edit is completed, download the project to DG-AMP.
Project is stored in the flash memory.

When you want to monitor/debug the program, perform "PLC connection (Upload)" to read the details of project from DG-AMP then perform said operation. (Immediately after downloading, TDsxEditor becomes the condition that monitor and debug are allowed".)

In the case of DG-AMP, connection target is valid only for "Online CPU".

## 4-5 Monitor/Debug

As is the case with editing, select the program that you want to monitor/debug to make the circuit appear.

## 4-6 How to check the firmware version

For checking the firmware version of DG-AMP,
select "Online", "PLC RAS information indication", then

Select "Model information".

Version information of DG-AMP displays in the right-side window.

## 5-1 Console

Console section at the front of DG-AMP body is as followed:

Liquid crystal display section
Upper section
Lower section

LED section

Switch section

1) Liquid crystal indicator

Upper section displays the normal time. In addition, when error occurs, this section displays the details of error.
Lower section displays the data in the internal register. In addition, setting of writing data is available.

| $*$ | 11 | $/ 03$ | 15 | $:$ | 25 |
| :--- | :--- | :--- | :--- | :--- | :--- |$: 00^{*}$,

Upper section Month / Day Hour: Minute: Second
Lower section Register address / Data display
2) LED section
(1) PWR LED (G)

Normally stays ON in green while the power stays ON.
(2) RUN LED (G)

Normally stays ON in green while the power stays ON.
(3) ALM LED (R)

Turn on red when error occurs.
(4) COM LED (Y)

While communication board (OPCN-1, etc) is connected, this LED turns on green after connection with high-level PLC has made and communication has been established.
(5) SD/RD LED (G)

While communication board (OPCN-1, etc.) is connected, this LED blinks in green when data is sent/ received.
3) Switch section
(1) UP/DOWN switch

Switch to make the data value (numeric value) at cursor position to be counted up/down by 1/-1.
(2) HEX/DEC switch

Switch to make the data indicated value to appear in hexadecimal/decimal.
(3) L/R switch

Switch to make the cursor position to shift to the left or right.
(4) ENT switch

Turning ON this switch confirms the data value or cursor zone. (Shift to the right is performed)
(5) MENU switch

Turning ON this switch cancels the confirmation of cursor zone. (Shift to the left is performed)

## 5-2 Indication of the data

Normally, cursor position is present at register group set position ((1)) at the lower section of LCD.
Actuation of UP/DOWN, L/R and ENT switches under this condition allows the data value of the respective registers to be indicated.

Data display (Lower section side)

(1) (Selecting the register at) register group set position

Change 2-digit portion of the register number by actuating UP/DOWN switch to select the register which you want to indicate.

$$
\mathrm{iO} \rightarrow \mathrm{oO} \rightarrow \mathrm{gO} \rightarrow \mathrm{zO} \rightarrow \mathrm{ri} \rightarrow \mathrm{iO} \rightarrow \text { Repeat }
$$

After you have selected the register that you want to indicate, push ENT switch to move the cursor to the register number set position.
(Note) ki register can display and write only the ki register at the top of subprogram in the project made with TDsx Editor.
(2) (Setting the register number at) register number set position

Select the digit position that you want to change by actuating $\mathrm{L} / \mathrm{R}$ switch to change the register number by actuating UP/DOWN switch.
$1 \rightarrow 2 \rightarrow 3 \rightarrow \cdots \rightarrow \mathrm{~A} \rightarrow \cdots \rightarrow \mathrm{~F} \quad$ Repeat (when HEX/DEC switch is put to HEX),
After you have set the register number that you want to indicate by repeating, push ENT switch to move the cursor to the data indication position. Then, data value of the register that you have set appears at data indication section.
(3) (Confirming the data indication at) data indication section

After above operation (2), cursor moves to the data indication position and present data value appears in the data indication section.
You can confirm I/O data, etc. at this position.
If needed, change of cardinal number is available from HEX/DEC switch.

## 5-3 Writing of the data

After you made the register number that you want to write through actuation in above 5-2 to appear, push ENT switch to move the cursor to the data writing position.
(4) (Setting the writing data at) data writing position

Push of ENT switch under the condition (3) to make data indicator to hold, cursor moves to the data writing position and then set the writing data by actuating L/R and UP/DOWN switches.
After you have set the writing data, push of ENT switch to make the data to be written.
(Note) About 2 seconds are needed for writing process of ki register. Conform the renewal of the time (sec.) of upper section after ENT switch is pressed, and then do the next actuation (ex: actuation of MENU key.)
When you want to hold the indication state even without performance of writing, you can confirm the data at this cursor position.
In such a case, after indication confirmation, return the cursor to the register group set position (1) by MENU switch.
(5) Writing of the data

After completing the actuation (4), data indicated is written (cursor position does not change).
After data writing operation (Turning ON ENT switch), push the MENU switch to move cursor to the data indication position and written data appears in the data indicator.

## 5-4 Setting of the time

You can set the time of day (Year, month, hour, and minute) without using PC.
Normally indication state is as following:
[Normal time indicator (Upper section side)]

(1) Holding down MENU pushbutton for 5 seconds or more to make the indicator to change as following:
[Indicator for time setting (Upper section side)]

(2) Change the indication from Year $\rightarrow$ Month $\rightarrow$ Day $\rightarrow$ Hour $\rightarrow$ Minute by actuating R switch, and UP/DOWN for each value.
(Push of L switch allows the indication to be changed as Minute $\rightarrow$ Hour $\rightarrow$ Day $\rightarrow$ Month $\rightarrow$ Year).
Actuating the ENT switch finally causes the indication to be changed.

## 5-5 Version indication of firmware

To confirm the version of the firmware of DG-AMP; press MENU button and actuate L or R switch at same time to indicate

Remarks 1: Running status

| Register name | Relay name | Details | Unit |
| :---: | :---: | :---: | :---: |
